Attn: Mr. Thomas Salley

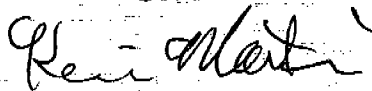

Dear Mr. Salley:

Re: Interstate Trucking, Former Patterson Avenue Winston-Salem, Forsyth Co.

This letter will document the disposition of the Contaminated soil removal during the closure of four underground storage tanks at the above location in Winston-Salem N.C. Please refer to your memo of 02/10/92 to Mr. Bill Horton, BNE Land and Development Company. Those tanks were removed on June 19 and 20, 1991 under the technical supervision of S&EC. Contaminated soil was excavated from around three of the tanks and placed on and covered by plastic per the N.C. Division of Environmental Management requirements. The property owner, BNE Land Development Company, considered several alternatives for disposition of the soil. They decided to transport the contaminated soil to Cunningham Brick Company in Thomasville, N.C. for the thermal remediation. Hauling of the soil began on 08/22/91 and was completed on 08/26/91. A total of 372.9 tons were delivered to Cunningham Brick. A copy of the transportation manifest for each load is attached. Soil and Environmental Consultants monitored the loading operation and hereby certifies that all contaminated soil at the site was hauled to Cunningham Brick Co.

We trust this (along with material previously sent to you) will provide the information you need but please contact us if you do have additional questions.

Sincerely,

A handwritten signature in cursive script, appearing to read "Kevin Martin".

Kevin Martin
